

CLAIMS

1. (Cancel)

2. (Amended) A post formation laminar assembly comprised of:

a textile material with interior and exterior surfaces, a polymeric layer overlying the exterior surface, and a backing layer overlying the polymeric layer, that were laminated together and postformed in a molding apparatus, with the polymeric layer having a post
5 formation permeability of 500 rayls or less as measured by concentric airflow resistance equipment.

3. (Amended) A vehicle sound insulating carpet assembly comprised of:

a carpet member with face and interior surfaces, a polymeric layer overlying the interior surface, sound insulating material overlying the polymeric layer, and means for fixing the carpet member, polymer layer and insulating material together in a carpet
5 assembly structure having a permeability of no more than 500 rayls as measured by concentric airflow resistance equipment.

4. (Cancel)

5. (Amended) A post formation assembly comprised of:

a panel with interior and exterior surfaces, a polymeric layer overlying the exterior surface, and a backing layer overlying the polymeric layer, that were laminated together and post formed in a molding apparatus, with the post formation panel having a permeability of 500 rayls or less as measured by concentric airflow resistance equipment.

6. (Amended) A vehicle carpet assembly having face and interior surfaces with sound insulating material affixed adjacent the interior surface and a permeability of 500 rayls or less as measured by concentric airflow resistance equipment.
